

CNC Shark Pro Plus Routing System

EQ 001145

With a table measuring 15-3/4" x 31-1/2", the CNC Shark is ideally suited for carvings and machining operations on a large variety of signs, doors and other small projects. It boasts impressive power, speed, accuracy, and ease of use. With its robust steel and high-density poly-ethylene construction, it can take accidental impacts that would normally damage or destroy an aluminum or MDF machine.

The included clamping table features two hold-down slots for securing work anywhere along the length of the table. Simply connect the USB cable to the controller box and the other end to your computer (not compatible with Mac computers).

The CNC Shark also includes the NEW Virtual Zero software. This new and CNC Shark exclusive software "maps" the surface of your table or work piece and uses the map as a dynamic reference point. This virtually eliminates problems caused by warped or bowed work pieces.

Includes:

CNC Shark Pro Plus Routing Table, Cut 3D Software, Bosch PR20EVSK Colt VS Pal Router Kit, Router Bit, Power cord, USB Cord, controller, Instruction Manual
